

Copper THE Critical Commodity

Size, Growth & Development Optionality
at Low Elevation in Chile

February 2023

32nd Global Metals,
Mining & Critical Minerals
Conference

Feb. 26, 2023 - March 1, 2023 | Hollywood, Florida

Disclaimer & Forward Looking Statements

Disclaimer

This presentation (the "Presentation") is to be used by the recipient for informational purposes only and does not purport to be complete or contain all of the information that may be material to the current or future business, operations, financial condition or prospects of Hot Chili Limited ("Hot Chili" or the "Company"). Each recipient should perform its own independent investigation and analysis of Hot Chili, and the information contained in this Presentation is not a substitute therefor. Hot Chili makes no representation or warranty, express or implied, as to the accuracy or completeness of the information contained in this Presentation or in any other written or oral communication transmitted to any recipient by any party. By accepting this Presentation, the recipient agrees that neither Hot Chili nor any of its officers, directors, employees or representatives has any liability for any representations or warranties, express or implied, contained in, or for any omissions from, this Presentation or any such other written or oral communication from any person.

Certain information contained herein is based on, or derived from, information provided by independent third-party sources. Hot Chili believes that such information is accurate and that the sources from which it has been obtained are reliable; however, Hot Chili has not independently verified such information and does not assume any responsibility for the accuracy or completeness of such information.

This Presentation should not be considered as a recommendation from any person to purchase any securities. Each person for whom this Presentation is made available should consult its own professional advisors in making its own independent investigations and assessment and, after making such independent investigations and assessments, as it deems necessary, in determining whether to proceed with any investment in the Company.

Forward-Looking Statements

This Presentation contains certain statements that are "forward-looking information" within the meaning of Canadian securities legislation (each, a "forward-looking statement"). Forward-looking statements reflect the Company's current expectations, forecasts and projections with respect to future events, many of which are beyond the Company's control, and are based on certain assumptions. No assurance can be given that these expectations, forecasts or projections will prove to be correct, and such forward-looking statements included in this Presentation should not be unduly relied upon. Forward-looking information is by its nature prospective and requires the Company to make certain assumptions and is subject to inherent risks and uncertainties. All statements other than statements of historical fact are forward-looking statements. The use of any of the words "plan", "estimate", "expect", "propose", "may", "will", "project", "should", "could", "believe", "anticipate", "predict", "forecast", "potential" and similar expressions are intended to identify forward-looking statements.

The forward-looking statements within this document are based on information currently available and what management believes are reasonable assumptions. Forward-looking statements speak only as of the date of this Presentation. In addition, this presentation may contain forward-looking statements attributed to third-party industry sources, the accuracy of which has not been verified by the Company.

In this Presentation, forward-looking statements relate, among other things, to: prospects, projections and success of the Company and its projects; expected cash inflows; whether or not it will enter into any royalty or streaming transactions and the terms thereof; the ability of the Company to expand mineral resources beyond current mineral resource estimates; the results and impacts of current and planned drilling to convert inferred mineral resources to indicated, to extend mineral resources and to identify new deposits; opportunities for growth of mineral projects; the ability of the Company to secure necessary infrastructure; the terms and conditions related to use of existing port and electrical infrastructure, including the ability to access renewable energy sources; the outcomes of planned economic studies, whether or not the Company will make a development decision and the timing thereof; the ability of the Company to consolidate additional landholdings around its project; estimates of cost; and estimates of planned exploration.

Forward-looking statements involve known and unknown risks, uncertainties and other factors, which may cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. A number of factors could cause actual results to differ materially from a conclusion, forecast or projection contained in the forward-looking statements in this Presentation, including, but not limited to, the following material factors: operational risks; risks related to the cost estimates of exploration; sovereign risks associated with the Company's operations in Chile; changes in estimates of mineral resources of properties where the Company holds interests; recruiting qualified personnel and retaining key personnel; future financial needs and availability of adequate financing; fluctuations in mineral prices; market volatility; exchange rate fluctuations; ability to exploit successful discoveries; the production at or performance of properties where the Company holds interests; ability to retain title to mining concessions; environmental risks; financial failure or default of joint venture partners, contractors or service providers; competition risks; economic and market conditions; and other risks and uncertainties described elsewhere in this Presentation and elsewhere in the Company's public disclosure record.

Although the forward-looking statements contained in this Presentation are based upon assumptions which the Company believes to be reasonable, the Company cannot assure investors that actual results will be consistent with these forward-looking statements. With respect to forward-looking statements contained in this Presentation, the Company has made assumptions regarding: future commodity prices and demand; availability of skilled labour; timing and amount of capital expenditures; future currency exchange and interest rates; the impact of increasing competition; general conditions in economic and financial markets; availability of drilling and related equipment; effects of regulation by governmental agencies; future tax rates; future operating costs; availability of future sources of funding; ability to obtain financing; and assumptions underlying estimates related to adjusted funds from operations. The Company has included the above summary of assumptions and risks related to forward-looking information provided in this Presentation in order to provide investors with a more complete perspective on the Company's future operations, and such information may not be appropriate for other purposes. The Company's actual results, performance or achievement could differ materially from those expressed in, or implied by, these forward-looking statements and, accordingly, no assurance can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits the Company will derive therefrom.

For additional information with respect to these and other factors and assumptions underlying the forward-looking statements made herein, please refer to the public disclosure record of the Company, including the Company's most recent Annual Report, which is available on SEDAR (www.sedar.com) under the Company's Issuer Profile. New factors emerge from time to time, and it is not possible for management to predict all of those factors or to assess in advance the impact of each such factor on the Company's business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statement.

The forward-looking statements contained in this Presentation are expressly qualified by the foregoing cautionary statements and are made as of the date of this Presentation. Except as may be required by applicable securities laws, the Company does not undertake any obligation to publicly update or revise any forward-looking statement to reflect events or circumstances after the date of this Presentation or to reflect the occurrence of unanticipated events, whether as a result of new information, future events or results, or otherwise. Investors should read this entire Presentation and consult their own professional advisors to ascertain and assess the income tax and legal risks and other aspects of an investment in the Company.

Opportunity

Size, growth and copper development optionality at low elevation in Chile

Copper Optionality & Growth

- One of the top 10 largest, low risk, undeveloped copper resources (S&P 2022) with **2.8Mt Cu** (in 725Mt) **indicated and 0.6Mt Cu** (in 202Mt) **inferred** in a “low risk” jurisdiction
- Highly leveraged to looming structural shortage in copper supply
- Commenced 10,000m drill program on prospective porphyry targets

By-Product Metal & Economic Leverage

- Molybdenum resource: **67.4kt Mo** (in 725Mt) **indicated and 13.4kt Mo** (in 202Mt) **inferred** – molybdenum recently hit record highs
- Gold resource: **2.6Moz Au** (in 725Mt) **indicated and 0.4Moz Au** (in 202Mt) **inferred** – potential to monetize gold exposure via royalty and/or stream financing

Leadership

- Fit for purpose management team and board
- Extensive Chilean, copper exploration to operating and capital markets expertise
- Proven ability to increase value per share via smart exploration with **1,500% growth in resources over last 11 years**

Strategy

- Refocus on growth and **increasing per share copper exposure**
- Defer material development expenditure until the market is “screaming” for new meaningful production
- **Aim to Lift Costa Fuego resource and study-scale** from +20yr 100ktpa copper project toward 150ktpa copper project

Copper – THE Critical Commodity

Looming structural supply deficit means copper incentive price must escalate

Cu Inventories At Critical Levels

Fiscal & Geopolitical Uncertainty

Declining Cu Production Grades
& Lack of Major New Discoveries

Increasing Cu Demand From NET
ZERO Mandates

Committed **NEW** Cu Capacity
Lacking

Material Delays in Permitting NEW
& LARGE Cu Projects

Corporate Summary – Fit For Purpose Board & Management

Recent North American secondary listings provide platform for re-rate to Nth American peer group

Investors by Type

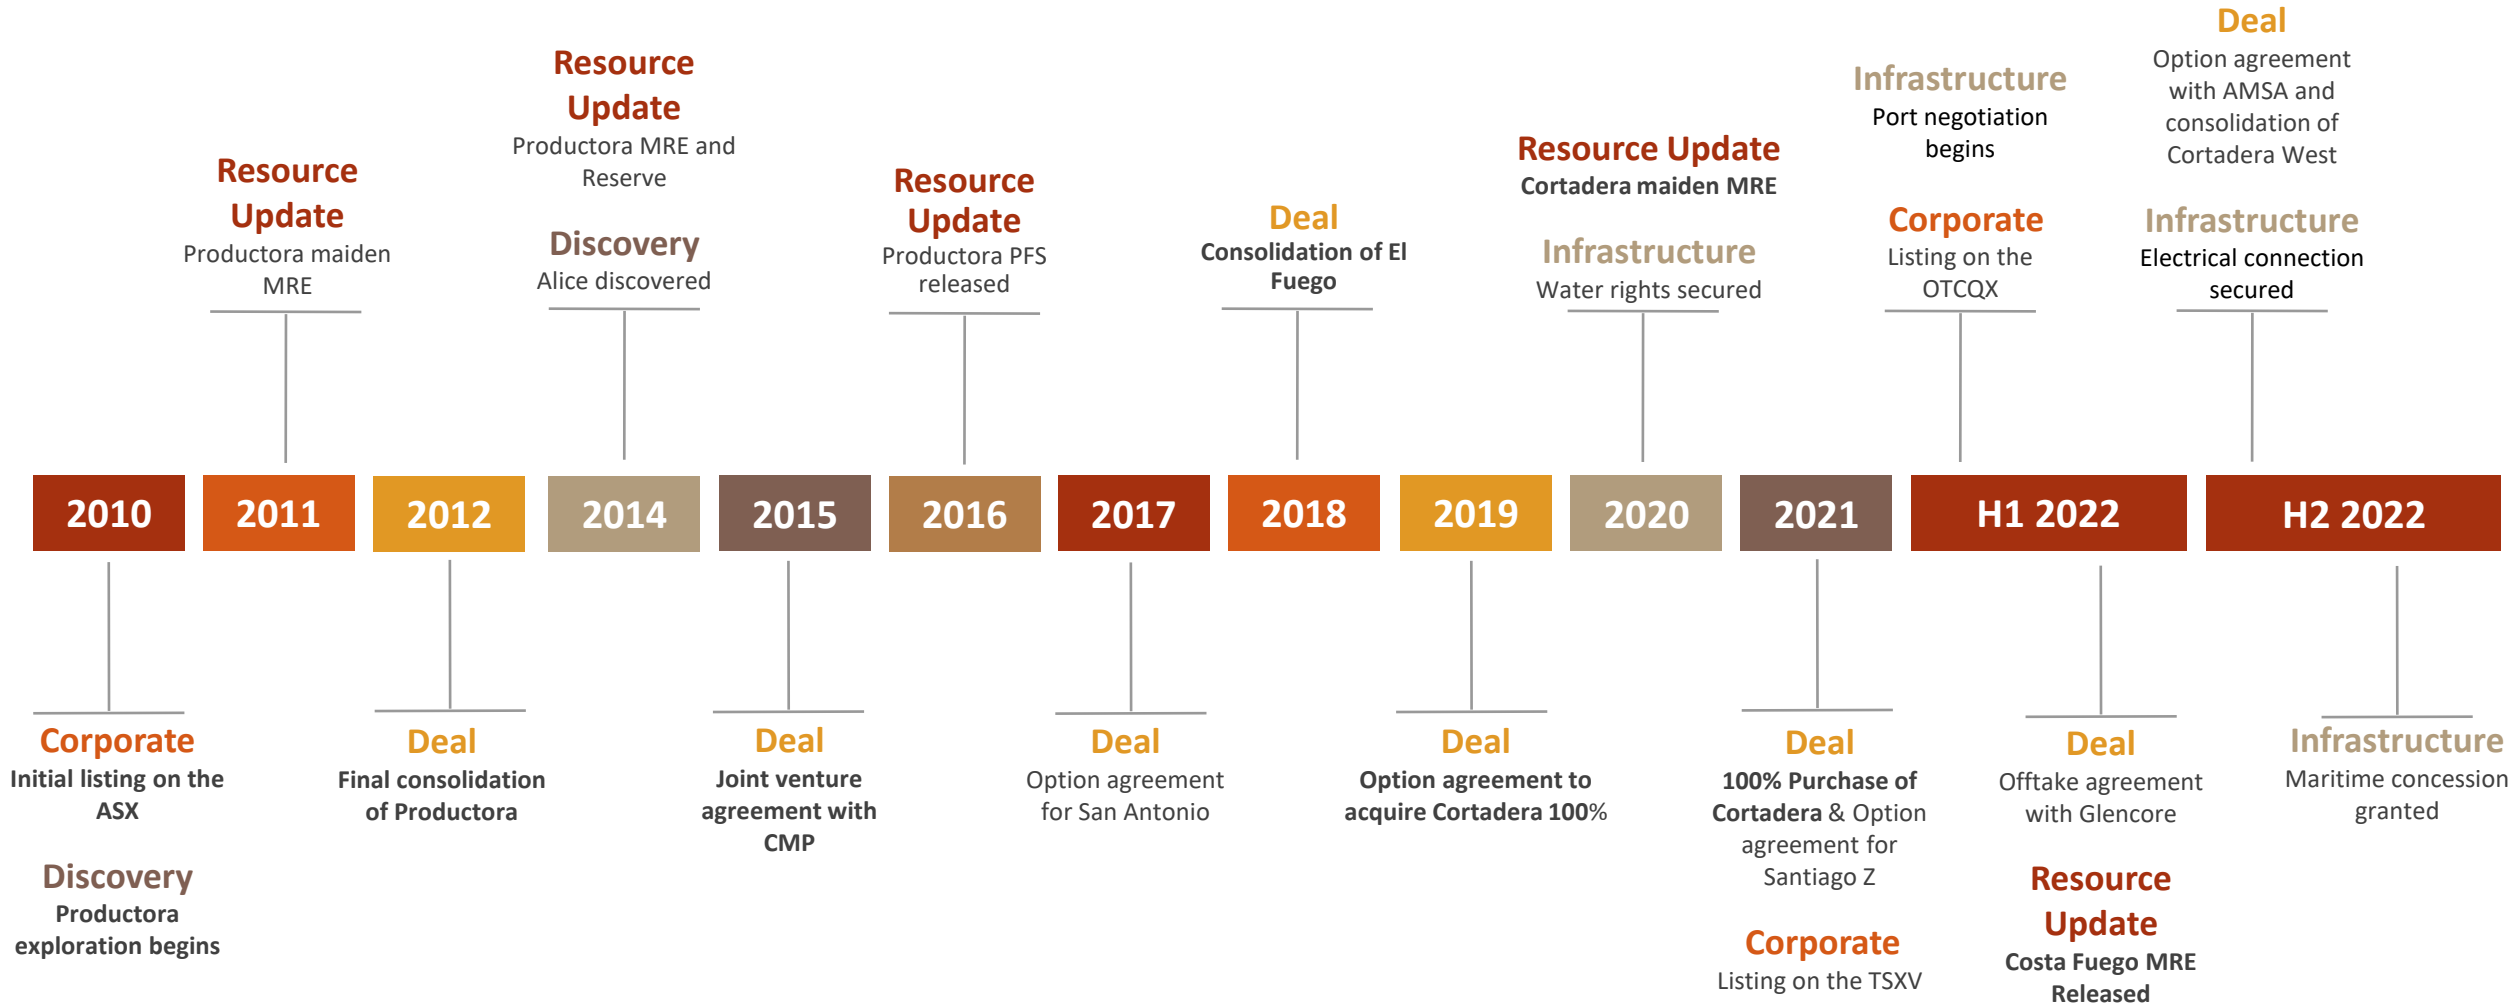

Investors by Location

Costa Fuego – Track Record of Consolidation & Exploration Success

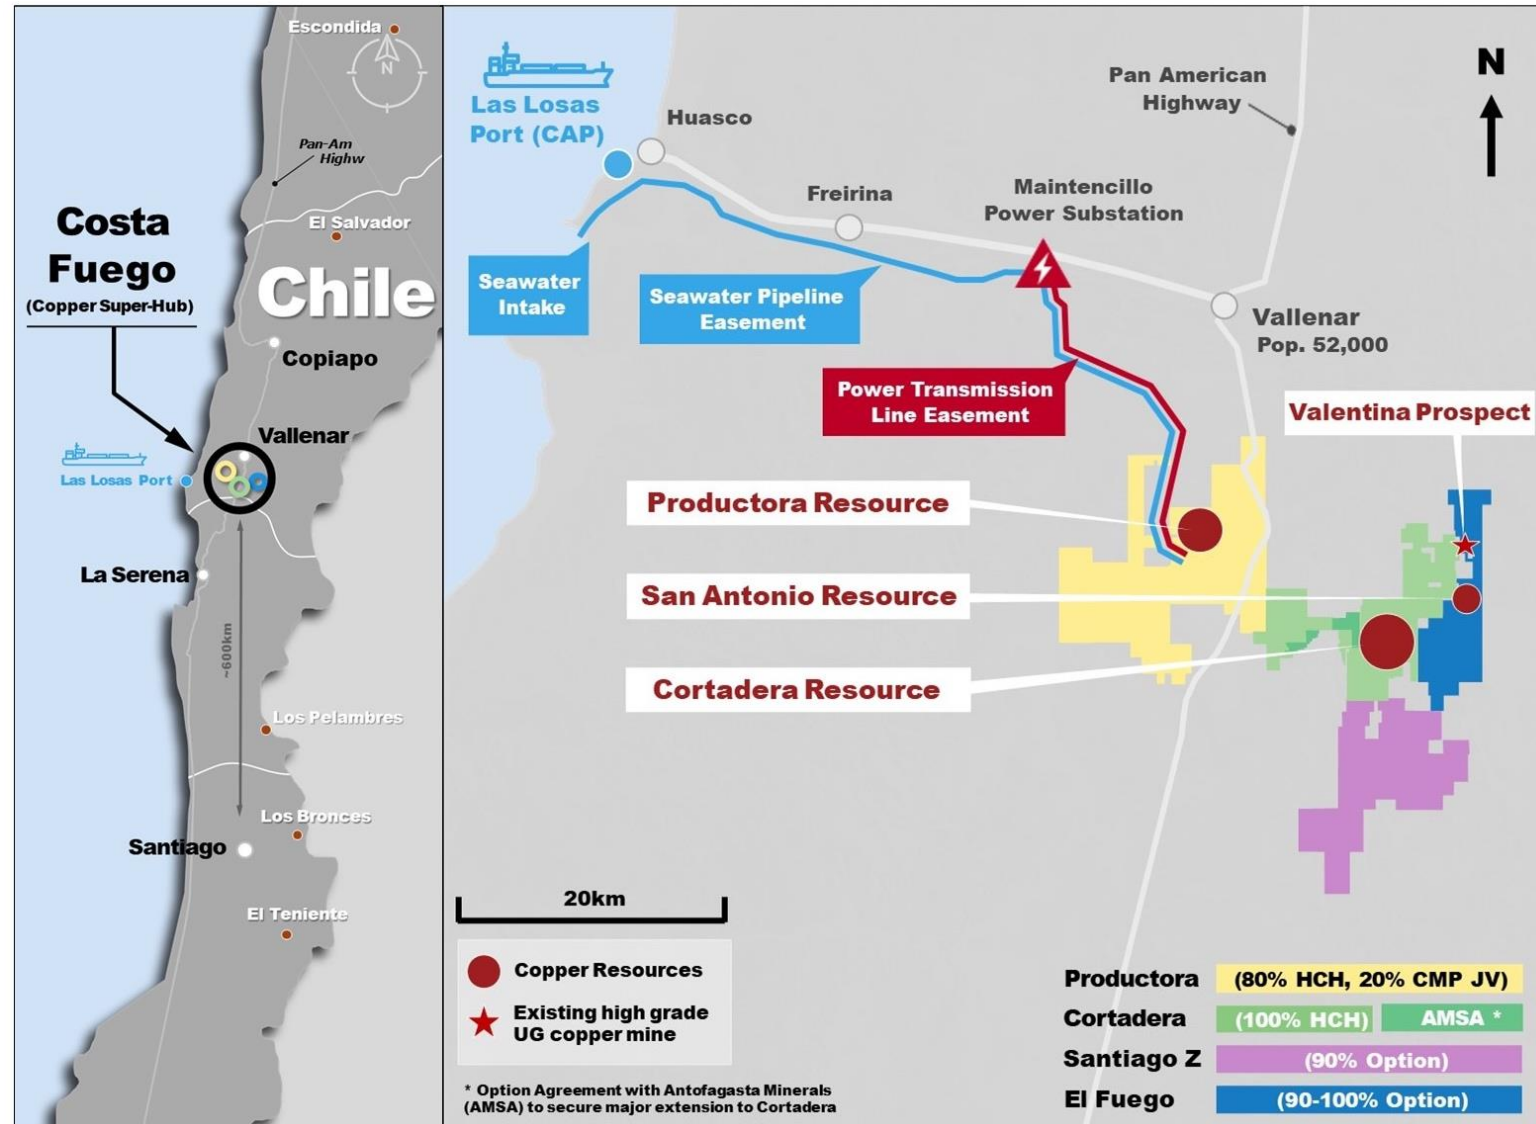

Decade of commitment to acquisition, growth and future development de-risking

Low Elevation Advantage – Lowers Economic Hurdle

Long term commitment to risk-reduction of future development

- 1 Water Risk Removed**
 - ✓ Granted maritime concession with land access
 - ✓ All water required for operations secured
- 2 Power Line Risk Removed**
 - ✓ Secured electrical connection to grid
 - ✓ Opportunity to be 100% renewable
- 3 Permitting Timelines Reduced**
 - ✓ Secured easement corridors for power and water pipelines
 - ✓ Secured most of proposed mining infrastructure surface rights
- 4 Existing Infrastructure**
 - ✓ Reduces future CAPEX
 - ✓ Improves ESG metrics
- 5 Offtake Not Fully Committed**
 - ✓ Glencore can purchase up to 60% of concentrate for first 8 years of LOM – at benchmark terms but must maintain >7.5% ownership in Company¹

¹See announcement dated 2nd March 2022, for details

Track Record of Growth¹ Via Consolidation & Discovery

Increased indicated metal by 1,500% over 11 years, 82% of total resource now in indicated category

¹ See slide 28 and 29 for complete Minera Resource (resource) disclosure of Cortadera, Productora and San Antonio
See announcement dated 6th Sept 2011, announcement dated 12th Oct 2020 and announcement dated 31st March 2022 for details)

*CuEq takes into account assumed commodity prices and average metallurgical recoveries from testwork

Bulk Tonnage Copper-Gold Resources at Cortadera & Productora

Open pit and underground cave development potential 14km apart – central processing strategy

Long section through Cortadera Resource (looking northeast)

Oblique view of Productora Resource (looking northeast)

**CuEq takes into account assumed commodity prices and average metallurgical recoveries from testwork. See slides 28 and 29 for complete Mineral Resource disclosure of Cortadera and Productora, respectively.*

AMSA Option¹ & New Leases² – Low Cost & High Value Growth Potential

Larger porphyry cluster potential at Cortadera, 10,000m drill program underway

Fourth Porphyry Confirmed at Cortadera

LCD0001 (56m depth) grading 1.0% Cu, 0.7g/t Au, 4.6g/t Ag

New Drill Results from LCD0001³
120m grading 0.5% CuEq* from 23m depth
incl. 38m grading 1.0% CuEq*

*CuEq takes into account assumed commodity prices and average metallurgical recoveries from testwork. See slide 28 for complete Mineral Resource (resource) disclosure of Cortadera

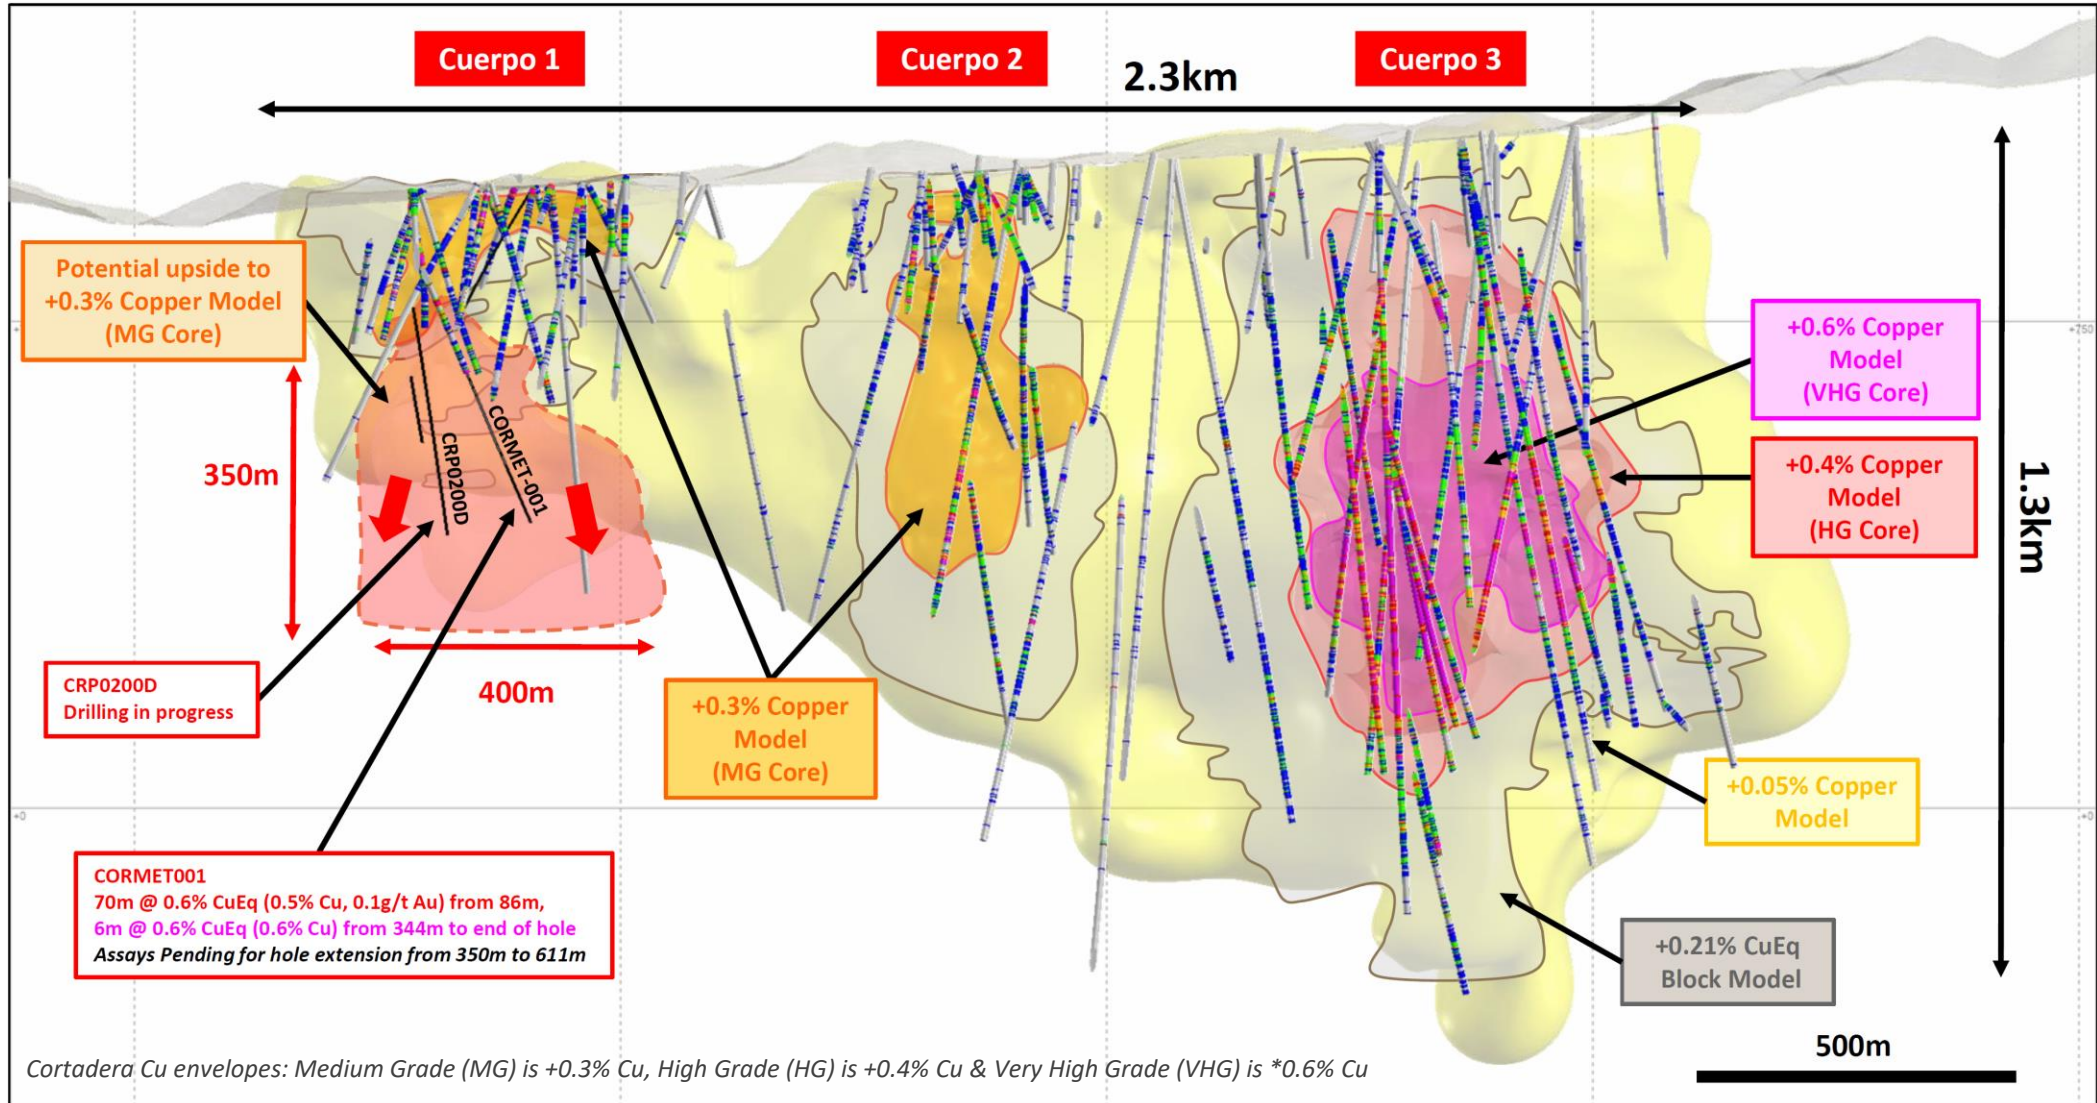

¹Option to acquire 100% with 6,000m drilling and US\$1.5M payment. Antofagasta Minerals SA (AMSA) retain 120 day 55% buy-back right for 5x HCC exploration expenditure

² New leases acquired via auction for US\$100,000 (See Announcement dated 28th Nov 2022 for details)

³ See announcement dated 23rd Feb 2023 for details

Cortadera Resource Upgrade On-Track

Ongoing Cuerpo 1 drilling confirms depth potential

*CuEq takes into account assumed commodity prices and average metallurgical recoveries from testwork. See slide 28 for complete Mineral Resource disclosure of Cortadera.

Future Growth Pipeline

Strategic land package, multiple untested targets

- 1 Cortadera Porphyry Cluster**
 - ✓ 5 new targets being drill tested
 - ✓ Large-scale resource growth potential
- 2 Corroteo**
 - ✓ Potential “look-alike” Productora-style bulk copper-gold target
 - ✓ Clearing permit approved
- 3 High Grade Satellites**
 - ✓ Valentina follow-up drilling - awaiting clearing permit
 - ✓ **8m grading 5.7% Cu & 24g/t Ag**, open to south (VAP009)¹
- 4 Consolidation Continuing**
 - ✓ AMSA deal is the latest in ongoing regional consolidation efforts

¹ See Announcement dated 8th Aug 2022 for further details
See slide 27 for complete Mineral Resource (resource) disclosure of Costa Fuego

One of the World's Largest Undeveloped Copper Projects (Not Controlled by A Major Mining Company)

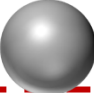

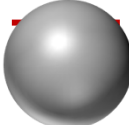

Low-altitude, no arsenic, infrastructure-rich, with no infrastructure or permitting impediments

- Graph constructed from public information (used without consent of the source) and normalized using the following commodity price deck: Copper US\$3.30/lb, Gold US\$1,700/oz, Molybdenum US\$14/lb, Silver US\$20/oz, Platinum US\$1,050/oz, Palladium US\$1,400/oz, Nickel US\$7/lb. Copper Equivalent grade and tonnes calculated using these prices and recoveries declared in each company's public documents about their project. See slides 23 and 24 for details of project Mineral Resources (resources) displayed in the above Costa Fuego benchmark graph.
- Hot Chili assembled these data from S&P and public company reports/announcements/presentations available at 30 November 2022.

Deeply Undervalued – ASX Listing Discount?

Significant valuation gap between ASX and TSX copper developers

ESG Strategy – Core to Creating Value Per Share

Contributing to Net Zero with copper – The Critical Commodity

ENVIRONMENTAL

- ✓ Minimize environmental footprint by leveraging off existing infrastructure (port, power, roads)
- ✓ Potential for 100% renewable power
- ✓ Seawater processing (water licence granted), eliminates need for fresh water

SOCIAL

- ✓ Chilean focused goods and services and local employer in economically challenged area
- ✓ Direct taxes and royalties, employee taxes, multiplier effect
- ✓ Ongoing local community programmes (two orphanages and mental health support)
- ✓ Workplace health and safety, employee engagement
- ✓ Supply desalinated water to local communities

GOVERNANCE

- ✓ Transparency, accountability and integrity
- ✓ Broad view of diversity – through all levels of Company
- ✓ ESG reporting
- ✓ Independent Chairman

Investment Highlights – Deeply Undervalued

Copper leverage + growth + disciplined development strategy = pathway to relative value re-rate

Copper Optionality

- One of top 10 largest, low-risk, undeveloped Cu deposits (S&P, 2022)
- Highly leveraged to looming shortfall in Cu

Copper Growth

- Track record of exploration success and smart acquisitions
- Commenced 10,000m drill program on contiguous Cu-Au-Mo porphyry targets

**Deep
Value**

Leadership

- Chilean expertise
- Copper cycle expertise
- Fit for purpose board & management

Timing is Everything

- Disciplined capital allocation
- Development de-risked due to location, existing infrastructure and permitting activities

Appendices

Leadership Strategy – Fit For Purpose Board & Management

Mining cycle and Chilean expertise

Independent Chairman
Dr Nicole Adshead-Bell

Geologist with >27 years combined technical, corporate (Executive and Director), institutional investor, investment banking and project financing experience

Managing Director & CEO
Christian Easterday

Geologist & Mineral Economist with >25 years global experience, fluent Spanish, founding Director of Hot Chili

Independent Director
Stephen Quin

Mining Geologist >41 years global experience from exploration to development, operations and closure. Former President & COO of Capstone

Non-Executive Director
Roberto de Andraca Adriasola

Chilean National with >25 years experience in the finance and mining sectors

Non-Executive Director
Mark Jamieson

Engineer with >20 years global mining experience, including sub level and block cave mines. General Manager Resource Engineering for Glencore's global copper group

EVP – Chile
José Ignacio Silva

Chilean National and lawyer with >20 years global legal and mining sector experience

COO
Grant King

Mining Engineer with >25 years global experience, including open pit, sub level and block cave projects and mines

Company Secretary & CFO
Penelope Beattie

Chartered CA with >20 years global experience

Geology Manager – Chile
Andrea Aravena

Chilean National and geologist >16 years Chilean mining/exploration experience

Resource Development Manager
Kirsty Sheerin

Resource geologist with >14 years global mining experience

Copper Demand & Supply Gap

Supply gap is real – size depends on speed to Net Zero

Forecast Demand Under IEA NZE Scenario

Cumulative copper demand/supply 2022-2030 under IEA NZE scenario (Mt) ⁽¹⁾		
Renewable energy		Mt Cu
Wind	2240GW	9.7
Solar	4160 GW	12.4
Other	720 GW	1.1
Battery storage	751 GW	0.2
Heat pumps (Europe)	40M	0.8
Grid expansion		76.0
Total renewable energy		100.1
Electric Vehicles (BNEF)		Mt Cu
Passenger	280M vehicles	15.2
Commercial/Bus	43M vehicles	3.2
Charging	84M units	1.0
Total electric vehicles		19.4
Total transition copper demand		119.5
Total non-transition demand		236.5
Global copper demand		355.0
Global copper supply (inc 96.6Mt scrap)		304.5
Cumulative refined copper deficit		-50.5

Qualifying Statements

Scientific & Technical Information (NI 43-101)

QUALIFIED PERSON AND REPORTING STANDARD

The Cortadera, Productora and San Antonio MRE's are reported to the standard of the Canadian National Instrument 43-101 "Standards of Disclosure for Mineral Projects", and as such have been completed by a Qualified Person (QP). A QP under NI43-101 guidelines is interchangeable with a Competent Person (CP) under the JORC Code and has been referred to as such below.

FURTHER INFORMATION

For further information on the Productura Project, please see the report titled "Productora Copper Project Preliminary Feasibility Study, Chile", effective date 29th October 2021, prepared by Boris Caro of Caro & Navarro Limitada, Leendert (Leon) Lorenzen of Mintrex Pty Ltd, Tom Kendall of Mintrex Pty Ltd, and Elizabeth Haren of Haren Consulting, available on the website of the Company and under the profile of the Company on www.sedar.com.

For further information on the Cortadera Project, please see the report titled "Cortadera Copper Deposit, Mineral Resource Estimate, Chile", effective date March 31st 2022 prepared by Elizabeth Haren of Haren Consulting, available on the website of the Company and under the profile of the Company on www.sedar.com.

For readers to fully understand the information in this Presentation, they should read the Technical Reports (available on www.sedar.com under the Company's issuer profile) in their entirety, including all qualifications, assumptions, and exclusions that relate to the information set out in this Presentation that qualify the technical information contained in the Technical Reports. The Technical Reports are intended to be read as a whole, and sections should not be read or relied upon when taken out of the context of the full Technical Reports. The technical information in this Presentation is subject to the assumptions, qualifications, and exclusions contained in the Technical Reports.

CAUTIONARY NOTE TO U.S. INVESTORS

This presentation has been prepared in accordance with the requirements of the securities laws in effect in Canada, which differ from the requirements of United States securities laws. The terms "mineral resource", "indicated mineral resource" and "inferred mineral resource" are defined in and required to be disclosed by NI 43-101; however, these terms are not defined terms under SEC S-K 1300 and are normally not permitted to be used in reports and registration statements filed with the SEC. It is reasonably expected that the majority of inferred mineral resources could be upgraded to measured or indicated mineral resource with continued exploration. In addition, the terms "mineral reserve" and "probable mineral reserve" are also defined in accordance with NI43-101 and not S-K 1300. Investors are cautioned not to assume that all or any part of an "indicated mineral resource" or "inferred mineral resource" will ever be upgraded to a higher category or converted into mineral reserves in accordance with S-K 1300. "Inferred mineral resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable. Disclosure of "contained ounces" in a mineral resource is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute "reserves" by SEC S-K 1300 standards as in place tonnage and grade without reference to unit measures. Accordingly, information contained in this Presentation contain descriptions of the Company's mineral deposits that may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

Qualified Person

Scientific & Technical Information (NI 43-101)

Competent Person's Statement – Exploration Results & Presentation

Exploration information in this Announcement is based upon work compiled by Mr Christian Easterday, the Managing Director and a full-time employee of Hot Chili Limited whom is a Member of the Australasian Institute of Geoscientists (AIG). Mr Easterday has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a 'Competent Person' as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (JORC Code). Mr Easterday consents to the inclusion in the report of the matters based on their information in the form and context in which it appears.

Mr Easterday has reviewed and approved the technical and scientific information in this presentation.

Competent Person's Statement – Costa Fuego Mineral Resources

The information in the presentation to which this statement is attached that relates to Mineral Resources for Cortadera, Productora and San Antonio which constitute the combined Costa Fuego Project is based on information compiled by Elizabeth Haren, a Competent Person who is a Member and Chartered Professional of The Australasian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists. Ms Haren is a full-time employee of Haren Consulting Pty Ltd and an independent consultant to Hot Chili Limited. Ms Haren is one of the Company's Qualified Persons for the Costa Fuego Copper Project, as defined in NI43-101. Ms Haren has reviewed and approved the scientific and technical disclosure in this presentation and no limitations were imposed on the verification process. Ms. Haren is independent of Hot Chili Limited. As required by the JORC Code, 2012 which is recognised as an acceptable foreign code, Ms Haren has sufficient experience, which is relevant to the style of mineralisation and types of deposits under consideration and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ms Haren consents to the inclusion in the report of the matters based on her information in the form and context in which it appears. For further information on the Costa Fuego Project, refer to the technical report titled "Resource Report for the Costa Fuego Technical Report", dated March 31st 2022, which is available for review under Hot Chili's profile at www.sedar.com.

Mineral Resources

Mineral resources are not mineral reserves and do not have demonstrated economic viability. These mineral resource estimates include inferred mineral resources that are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. It is reasonably expected that the majority of inferred mineral resources could be upgraded to measured or indicated mineral resource with continued exploration.

The estimate of mineral resources was calculated based on the Canadian Institute of Mining, Metallurgy and Petroleum ("CIM"), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions.

The effective date of the estimate of mineral resources is March 31, 2022. Hot Chili is not aware of political, environmental, or other risks that could materially affect the potential development of the mineral resources.

Notes to Mineral Resource Disclosure – Costa Fuego

Costa Fuego Copper-Gold Project Mineral Resource Estimate, March 2022 (using +0.25% CuEq cut-off grade) and by open pit (top), underground (middle) and total (bottom)

¹ Reported on a 100% Basis - combining Mineral Resource estimates for the Cortadera, Productora and San Antonio deposits. Figures are rounded, reported to appropriate significant figures, and reported in accordance with CIM and NI 43-101. Metal rounded to nearest thousand, or if less, to the nearest hundred. Total Resource reported at +0.21% CuEq for open pit and +0.30% CuEq for underground

² Copper Equivalent (CuEq*) reported for the resource were calculated using the following formula: $CuEq\% = ((Cu\% \times Cu \text{ price } 1\% \text{ per tonne} \times Cu_recovery) + (Mo \text{ ppm} \times Mo \text{ price per g/t} \times Mo_recovery) + (Au \text{ ppm} \times Au \text{ price per g/t} \times Au_recovery) + (Ag \text{ ppm} \times Ag \text{ price per g/t} \times Ag_recovery)) / (Cu \text{ price } 1\% \text{ per tonne})$. The Metal Prices applied in the calculation were: Cu=3.00 USD/lb, Au=1,700 USD/oz, Mo=14 USD/lb, and Ag=20 USD/oz. For Cortadera and San Antonio (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=56%, Mo=82%, and Ag=37%. For Productora (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=43% and Mo=42%. For Costa Fuego (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=51%, Mo=67% and Ag=23%

Notes to Mineral Resource Disclosure – Cortadera

Cortadera Deposit Mineral Resource Estimate, March 2022 (open pit, using +0.21% CuEq cut-off grade & UG using 0.30% CuEq)

San Antonio Deposit Mineral Resource Estimate, March 2022 - reported by classification (open pit, using +0.21% CuEq cut-off grade)

San Antonio Total Resource		Grade					Contained Metal				
Classification	Tonnes	CuEq	Cu	Au	Ag	Mo	Copper Eq	Copper	Gold	Silver	Molybdenum
(+0.21% CuEq*)	(Mt)	(%)	(%)	(g/t)	(g/t)	(ppm)	(tonnes)	(tonnes)	(ounces)	(ounces)	(tonnes)
Inferred	4.2	1.2	1.1	0.01	2.1	1.5	48,100	47,400	2,000	287,400	6

¹ Reported on a 100% Basis - combining Mineral Resource estimates for the Cortadera, Productora and San Antonio deposits. Figures are rounded, reported to appropriate significant figures, and reported in accordance with CIM and NI 43-101. Metal rounded to nearest thousand, or if less, to the nearest hundred. Total Resource reported at +0.21% CuEq for open pit and +0.30% CuEq for underground

² Copper Equivalent (CuEq*) reported for the resource were calculated using the following formula: $CuEq\% = ((Cu\% \times Cu\ price\ 1\% \text{ per tonne} \times Cu_recovery) + (Mo\ ppm \times Mo\ price\ per\ g/t \times Mo_recovery) + (Au\ ppm \times Au\ price\ per\ g/t \times Au_recovery) + (Ag\ ppm \times Ag\ price\ per\ g/t \times Ag_recovery)) / (Cu\ price\ 1\% \text{ per tonne})$. The Metal Prices applied in the calculation were: Cu=3.00 USD/lb, Au=1,700 USD/oz, Mo=14 USD/lb, and Ag=20 USD/oz. For Cortadera and San Antonio (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=56%, Mo=82%, and Ag=37%. For Productora (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=43% and Mo=42%. For Costa Fuego (Inferred + Indicated), the average Metallurgical Recoveries were: Cu=83%, Au=51%, Mo=67% and Ag=23%

Sampling, Analysis & Data Verification

For Hot Chili Limited samples, a fixed cone splitter was used to create two nominal 12.5% samples (Sample "A" and "B"), along with the large bulk reject sample. The "A" sample is always taken from the same sampling chute, and comprises the primary sample submitted to the laboratory. The "B" samples were retained for use as the field duplicate sample. The coarse residues were collected into large plastic bags and were retained on the ground near the drillhole collar, generally in rows of 50 bags.

All RC drillhole sampling was executed at two metre intervals for Cortadera. Within logged mineralisation zones, the 2 m sample ("A" sample) was submitted. Outside the main mineralised zones (as determined by the logging geologist), 4 m composites were created from scoops of 2 m sample residues over this interval. The composited 4m samples were analysed first and, if required, the individual and original 2 m "A" samples comprising this 4m interval were sent for analysis. This ensured that no mineralisation was missed while minimising analytical costs. The same procedure was applied to RC drilling undertaken across Productora, however, drillhole sampling was executed at one metre intervals.

At Cortadera, the majority of diamond core has had systematic half-core sampled at two-metre intervals. Half-core was chosen as the preferred sampling method to ensure a representative sample was submitted for analysis, while also retaining half-core for review of lithology and mineralisation, and for further test work as required.

Prior to the cutting and sample process, two additional samples are also taken for Cortadera being Density and Geotechnical samples.

- Density samples are selected every 30 m if the geological conditions allow it and are provided to the laboratory for testwork.
- Geotechnical samples are taken for tests including triaxial (one sample per 250m) and uniaxial tests (one sample per 50 m).

Once assigned a sample number, individual samples to be sent to ALS laboratories were sealed using a staple gun and accompanied by three identical sample tickets (one stapled to plastic bag to identify any tampering/breakage of seal prior to opening at the laboratory in preparation and another placed in the bag). Any broken staple seals on samples were to be notified by ALS to Hot Chili. No sealed bags were reported as being opened or broken by ALS.

For both RC and diamond samples, sample bags were placed inside larger plastic bags and delivered by a dedicated truck to the ALS analytical laboratory in Coquimbo (Chile) for sample preparation and routine analysis.

Following analysis at ALS, the RC and diamond drilling coarse rejects were returned to site and stored in sequence in plastic bags under shade cloth at Hot Chili's nearby Productora core farm. The laboratory pulps were returned and stored at the Productora core farm where they are stored in organised, dry and safe storage containers.

Sampling, Analysis & Data Verification Cont.

Hot Chili has strict chain of custody security procedures for all samples sent to and from the analytical laboratories.

The ALS analytical laboratory in Coquimbo (Chile) completed all sample preparation and specific gravity test work, while ALS Santiago (Chile) completed all gold analysis, and ALS Lima (Peru) completed all other multielement analysis for the Cortadera assays used in the resource estimate. Hot Chili has implemented rigorous sample preparation and analytical procedures for both RC and diamond core samples, following consultation with ALS in Chile, to ensure that mineralised assays were reported with a high degree of confidence and a wide range of appropriate commodities were assessed.

Samples have been analysed by certified laboratories in Chile and Lima, Peru by standard analytical techniques including:

- Copper, silver and molybdenum were analysed by 4-acid digestion (Hydrochloric-Nitric- Perchloric-Hydrofluoric) followed by evaluation using Inductively Coupled Plasma - Optical Emission Spectrometry ("ICP-OES") or Atomic Absorption Spectrometry ("AAS");
- Copper results > 10,000 ppm were analysed by "ore grade" method Cu-AA62 (upper limit 40% Cu);
- Samples within the oxide and transitional weathering domains (as determined by geologists' logging) were analysed for "soluble copper" (upper limit 10% Cu) to detect the leachability of copper oxide minerals within these domains; and
- Gold was analysed by 30 or 50 g lead-collection Fire Assay, followed by ICP-OES or AAS.

The verification of input data included the use of company QA/QC blanks and reference material, field and laboratory duplicates, umpire laboratory checks and independent sample and assay verification.

The Qualified Person has assessed the drillhole database validation work and QAQC undertaken by Hot Chili and was satisfied the input data could be relied upon for the estimation of Indicated and Inferred Classified Mineral Resources.
